MATT TYRONE G. DE LEON

Software Developer
Bulacan, Philippines | matttyronedeleon@gmail.com | linkedin.com/in/matttyronedeleon | github.com/Matilukto

SUMMARY

Software developer who builds web, mobile and desktop applications and makes sure they hold up in real use. Shipped two client-approved systems, a barangay management system (web portal and mobile app) and a fingerprint attendance system, and tested websites and mobile apps as a QA intern. Open to junior software developer roles.

EDUCATION

BALIUAG UNIVERSITY Baliwag City, Bulacan
Bachelor of Science in Computer Science 2023 – 2026
Coursework completed. Capstone: PinacConnect, approved for adoption by the client barangay.

WORK EXPERIENCE

CERTICODE
QA Intern (On-the-Job Training) Aug 2026 – Oct 2026

- Tested websites and mobile apps before release: wrote and ran test cases across features and devices.
- Reported bugs with clear steps to reproduce, then re-tested the fixes until they passed.

PROJECTS

PINACCONNECT (Barangay Management Web & Mobile App) QA Lead · Mobile Co-developer

- Barangay system for resident and household records, complaints, blotter cases, document requests, events and announcements: one system with a web portal and a Flutter mobile app, used by admins, officials and residents.
- Led QA testing of the web portal across every module and co-developed the Flutter mobile app, including its REST API integration.
- Approved for adoption by the client barangay. Tech: PHP, MySQL, JavaScript, Tailwind CSS, Flutter, REST API.

BU HEALTHY AGING ATTENDANCE SYSTEM (Standalone Desktop App) Solo Developer

- Offline Windows app with a local database that registers senior citizens with a USB fingerprint scanner, records attendance per session and turns the records into reports.
- Built it end to end: scanner integration, SQLite database, every screen, Excel/CSV export, backup and restore, and an Inno Setup installer.
- Approved for implementation in Baliuag University's Healthy Aging Program. Tech: Python, SQLite.

ROUTE OPTIMIZER (Website) Solo Developer

- Orders multiple delivery stops into an efficient route using real road distances and estimates arrival times at each stop.
- Opens the optimized route in Google Maps for turn-by-turn navigation. Tech: JavaScript, Leaflet, OpenStreetMap, OSRM.
